Avery Dennison, STOPware Join Forces

Aug 4, 2004, BREA, CALIF. -- Avery Dennison Worldwide Office Products' Photo ID badge templates have been integrated into STOPware Inc.'s PassagePoint visitor management software. The partnership will allow businesses, government agencies and other groups using the software to print color visitor badges using Avery templates.

Combining requirements for high-level security and visitor badging and management, PassagePoint is a comprehensive visitor software package that allows lobby personnel to register visitors while printing photo identification badges and keep digital visitation records.

"Our relationship with STOPware underscores Avery Dennison's commitment to establishing alliances that provide organizations with versatile and innovative visitor badging solutions," Adam Bratter, group product manager for Aver Photo ID Systems, said in a statement.
